(54) METHOD FOR CONVERTING WML DOCUMENT INTO XHTML DOCUMENT

(57) Abstract:

PURPOSE: A method for converting a WML(Wireless Markup Language) document into an XHTML(extensible HTML) document. Is provided to convert a card comprised in a WML document into an XHTML document.

CONSTITUTION: If a WML document is inputted(10), a mobile phone parses the inputted document character by character(11). If a character is checked(12), the mobile phone recognizes the character as a text and inputs it to an XHTML document file as it is (13). Then the mobile phone checks tags(14). For convertible tags, the mobile phone converts the WML tags into XHTML tags(15). In case that unconvertible tags are checked, the mobile phone discards them(16). In case that <card> is detected, the mobile phone creates an XHTML document(17). If </card> is detected, the mobile phone stores and closes XHTML documents created up to now(18). After completing the conversion process(19), the mobile phone checks whether the created XHTML documents meet a defined rule(20).
